Key Performance Indicators: All TSPs have met the Drop Call Rate (DCR) benchmark of 2%. All TSPs have met the Call Setup Success Rate (CSSR) of 95%.

The Independent Drive Test has been carried out by M/s PhiMetrics Technologies Pvt. Ltd. on behalf of TRAI in Cochin to Trivandrum Highway Route from 9:00 AM to 9:00 PM; on 30th June 2018. The drive test covered an drive route of 250KMs over a period of one day. Approximately 230 calls were made for each of the 11 networks: four 2G networks, five 3G networks and one LTE network covering 6 unique TSPs.
Overview:

Telecom Regulatory Authority of India has been entrusted with the task of laying down the standards of quality of service to be provided by the service providers and ensuring its enforcement; and also TRAI is responsible for conducting the periodical audit of such services provided by the service providers so as to protect the interest of the consumers of telecommunications service.

TRAI is regularly monitoring the performance of Telecom Service Providers (TSP) against the benchmarks for the various Quality of Service (QoS) parameters laid down by the Authority. TSPs submit Performance Monitoring Reports to TRAI every quarter. TRAI also undertakes audit and assessment of Quality of Service through independent agencies to verify the Quality of Service claimed. The Audit agencies conduct sample ‘Drive tests’ across various cities in the country as part of audit and assessment of the TSPs’ performance.

In view of complaints on call drops and other network quality issues, on behalf of TRAI, an Independent Drive Test (IDT) was conducted by PhilMetrics Technologies Pvt. Ltd. on 30th June 2018 covering various locations in Cochin to Trivandrum Highway Route. The performance of Airtel, BSNL, Idea, Tata, Vodafone and Jio were monitored across various technologies (2G, 3G, and 4G). The drive test route was defined on the basis of several factors that include - areas from where call drop complaints are commonly received; areas of heavy usage; residential areas away from arterial roads; office areas; areas where previous Drive tests showed network issues; etc. The test results obtained from these drive tests were utilized to assess the network quality for Voice and Data services in terms of Voice: Coverage, Quality, Handover Success Rate, Call Setup Success Rate, Drop Call Rate and Block Call Rate.

Drive Test Details For Cochin to Trivandrum Highway Route:

Independent Drive test was conducted for a period of one day on 30th June 2018 in Cochin to Trivandrum Highway Route from 9:00 AM to 9:00 PM. Calls were made for 90 sec duration with wait time of 10 sec between calls in all technologies. 

Voice Tests: The drive test covered a drive route of approximately 250KMs over a period of one day on 30th June 2018. Approximately 230 calls were made for each of the 10 networks: four 2G (Lock Mode) networks, five 3G (Dual mode) networks and one VoLTE network covering 5 unique TSPs.

* In case of multiple call failure in similar geolocation in given period of 60sec has been counted as one call failure
* For Voice and Data KPI’s, 2G measurement is done with UE locked on 2G, 3G measurement is done with UE in Dual mode (2G & 3G) and 4G measurement is done with UE in Free Mode.
* 3G KPI’s which are calculated from UE in Dual Mode (2G & 3G) includes samples and events of 2G.
* 4G KPI’s which are calculated from the UE in Free Mode included samples and events of 2G & 3G.
**Voice Calls**

**Key Observations**

**QoS compliance** of the TSPs in Cochin to Trivandrum Highway for Voice across technologies 2G/3G/4G-VoLTE is given below:

</table>
RF Coverage relates to the geographical footprint within the system that has sufficient RF signal strength to provide for a call/data session. The Coverage rate of an TSP is calculated on the basis of % of samples in which the Rx level ≥ -85 dBm, RSCP is ≥ -90 dBm & RSRP ≥ -110 dBm. The details are as follows.

<table>
<thead>
<tr>
<th>TSP</th>
<th>Coverage Rate</th>

![Coverage Distribution Diagram](image)
I. Coverage Details (contd.)

BSNL 2G

RxLev Sub In Service (dBm)
- [Min, -85)  (1372)  (10.33%)
- [-85, -75)  (4343)  (32.7%)
- [-75, -65)  (4601)  (34.64%)
- [-65, Max]  (2907)  (22.34%)

Idea 2G

RxLev Sub In Service (dBm)
- [Min, -85)  (503)  (3.8%)
- [-85, -75)  (4844)  (36.62%)
- [-75, -65)  (3931)  (29.72%)
- [-65, Max]  (3950)  (29.86%)
I. Coverage Details (contd.)
For measuring voice quality, as per the QoS norms, RxQual \( \leq 5 \) for GSM TSPs, EcNo \( \geq -14 \) dBm for 3G TSPs, FER \( \leq 4\% \) for CDMA TSPs and SINR \( > 0 \) in case of VoLTE is considered to be good, where as quality beyond this benchmark is considered to be bad. The benchmark should usually be \( \geq 95\% \).
